

NEW/LUX3D

The Masters of 3D Light Effects

This line is created in collaboration with ETTLIN LUX®, the leader in innovative technical fabrics.

It offers a variety of kinetic fabrics that transform simple lighting concepts into 3D dynamic designs.

An ideal combination of decorative surfaces, pleasant to the touch, with a three-dimensional lighting design that creates exciting spatial bodies of light with an exceptional feel of depth.

NEW/LUX3D gives your walls and ceilings unique and creative lighting effects, contours and shapes.

ETT LIN LUX® LIGHT EFFECTS HOW TO CONTROL THE LIGHT STRUCTURES

The reference and placement of the fabric, as well as the light source, influence the shape and form of the light structures. The effect on the viewer is not only technical, but also visual: all depends on the angle at which the view falls onto the surface of the fabric.

A dynamic perception of the light is created.

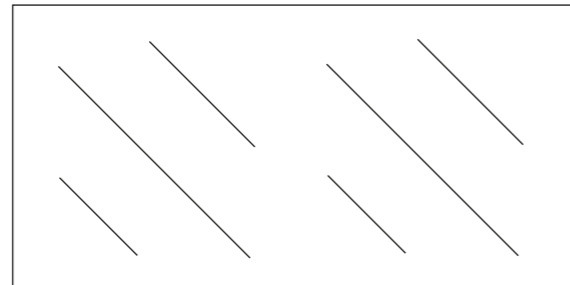

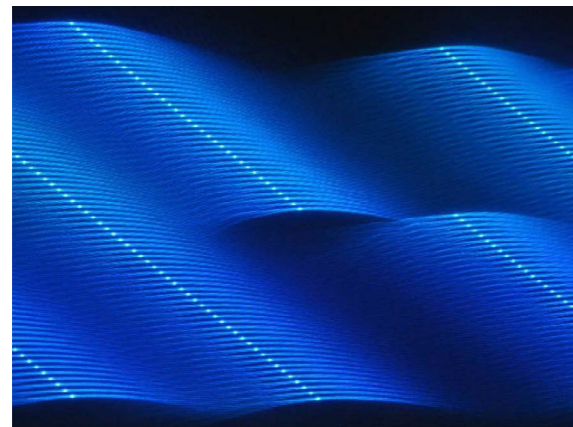

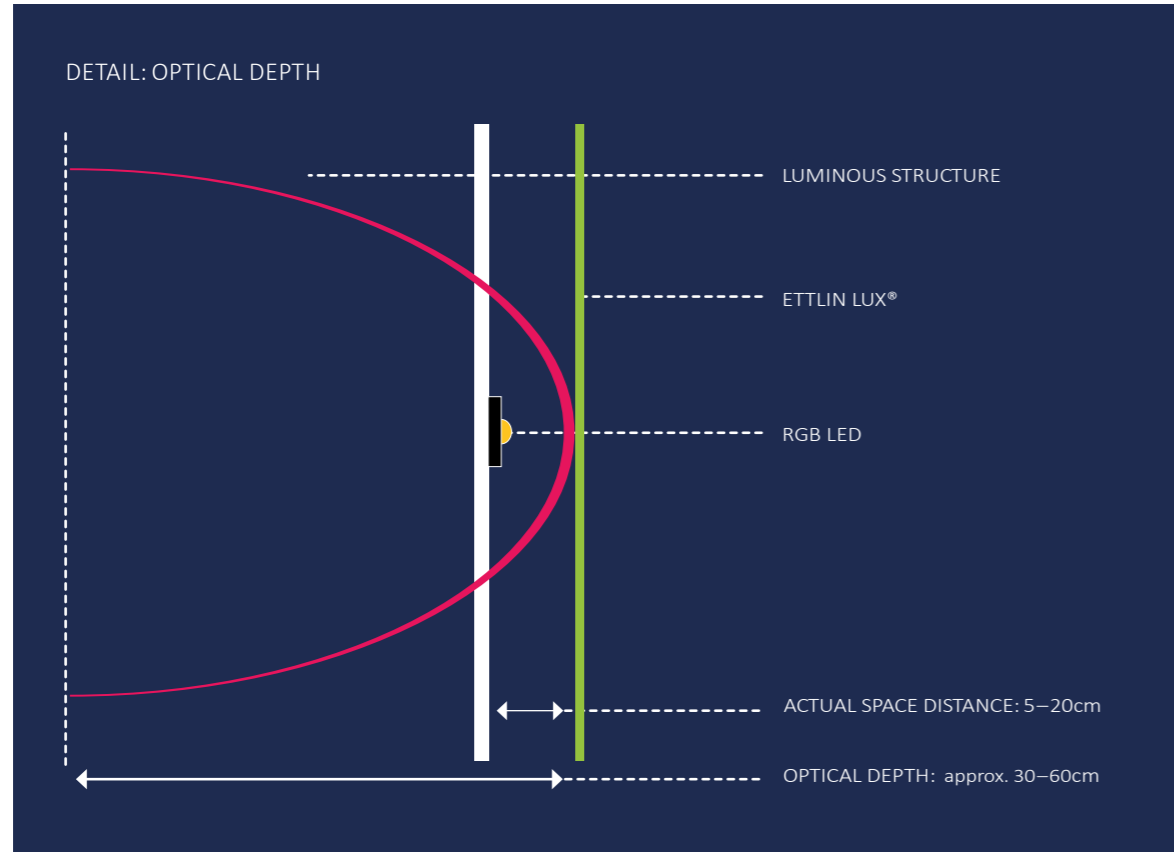

Any type of dot shaped light source (LED) can be used, but there are a few basic correlations:

- Use a large beam angle to achieve a long light line
- A high light output will lengthen the light line
- The larger the LED chip, the wider the line

NEW/LUX3D

THE LUX EFFECT
The luminous structures are created by the special ETTLIN LUX® material interacting with a dot of light behind the material.
